Contents

1. Install and sign in
2. Who can do what
3. Tables and taking an order (waiters)
4. Sections: two groups at one table
5. Voice search
6. Print the bill and take payment (managers)
7. Parcels and kitchen tickets
8. Bills: see, reprint, edit, delete (owner)
9. Analytics
0. Menu
1. Settings: printers, tables, staff logins
2. Rooms (lodge plan)
3. Questions and fixes

1. Install and sign in

1. Scan the Master Bill QR code with the phone camera and open the link.
2. Download **master-bill.apk** and tap it. If Android asks, allow “Install unknown apps” for the browser.
3. Open **Master Bill**. The Techyverve start screen shows for a moment.
4. Type your **Login ID** (for example *ramesh*) or the owner’s email, and the password the owner gave you. Tap **Sign In**.

> You stay signed in until you tap **Sign Out** (Settings, at the bottom). Closing the app, restarting the phone or losing internet does not sign you out.

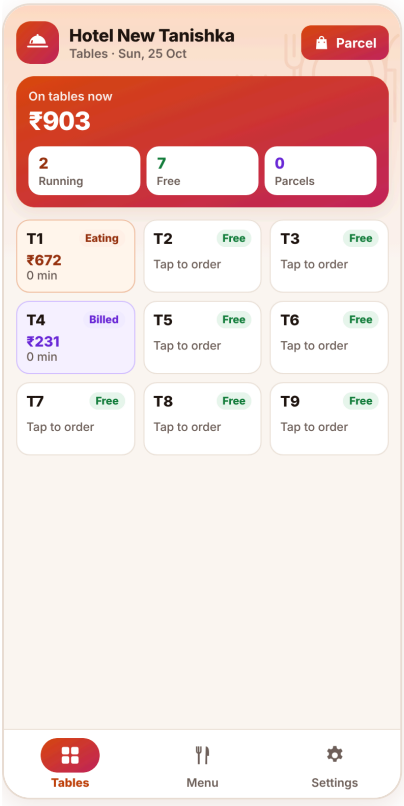

> New versions use the same QR code. Installing over the old app keeps everyone signed in.

2. Who can do what

Task	Waiter	Manager	Owner
Take table orders, sections, voice search, send to kitchen	✓	✓	✓
Parcels, print bill, take payment (Cash/UPI/Card/Split)		✓	✓
Bills and Analytics (in Settings), rooms		✓	✓
Edit or delete a paid bill			✓
Menu, tables, GST, staff logins, bill details			✓

The bottom bar shows only what each person can use: waiters see **Tables** and **Settings**; owners also see **Menu**. Lodge hotels also see **Rooms**.

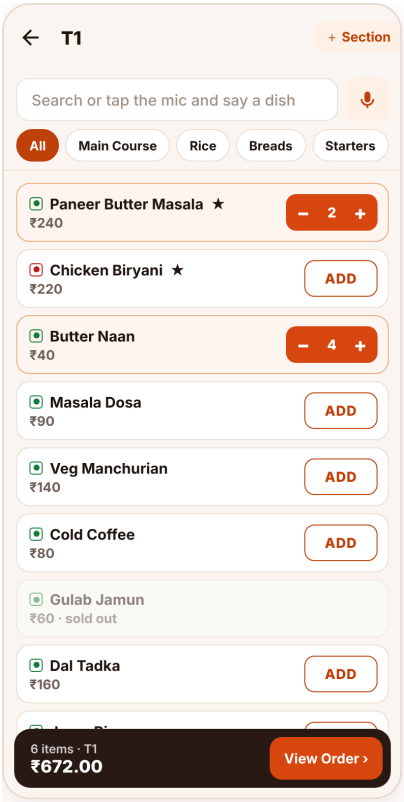

3. Tables and taking an order

The orange card shows money on tables now, and how many tables are running, free, and parcels.

- **Free** (white): tap to start an order.
- **Eating** (orange): order running, with amount and time.
- **Billed** (purple): bill printed, waiting for payment.

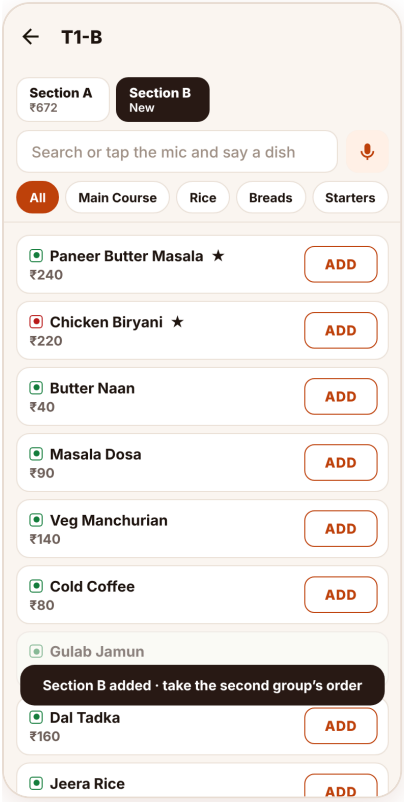

Pull the screen down to refresh. Orders from other phones appear by themselves.

1. Tap **ADD** on a dish; use **−** and **+** to change the quantity.
2. Use the category chips or the search box to find dishes. ★ dishes show first.
3. The dark bar at the bottom shows items and total. Tap **View Order**.
4. Tap **Save Order**. Taps are kept on the phone until saved, so nothing is lost if the internet drops.

> Leaving the screen saves the order automatically.

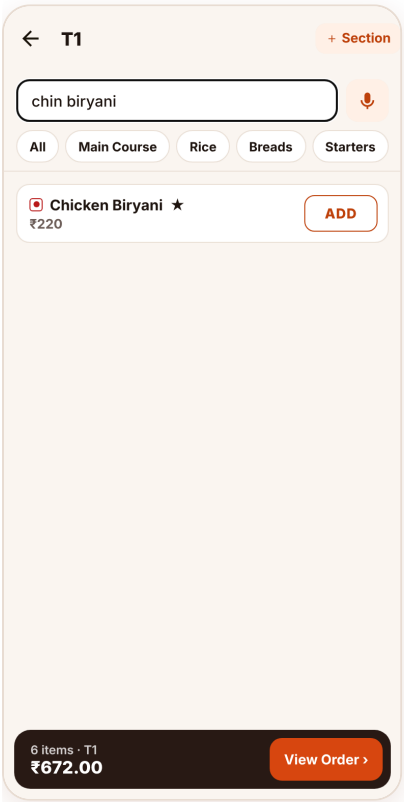

4. Sections: two groups at one table

When two different groups sit at the same table, each can have its own bill.

1. Open the table (it must already have dishes) and tap **+ Section** at the top right.
2. Section B opens. Take the second group's order.
3. Switch with the **Section A / Section B** tabs, each showing its total. Each section is billed separately.

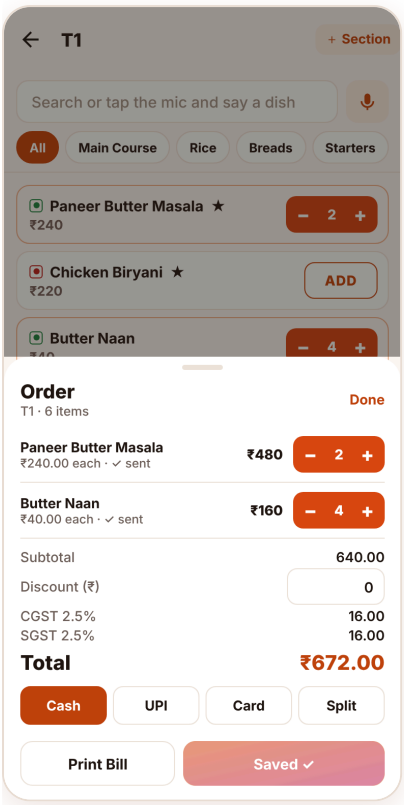

5. Voice search

1. Tap the **mic** next to the search box.
2. Say the dish, for example "chicken biryani" or "puneri misal".
3. The best matching dishes appear. Tap **ADD**.

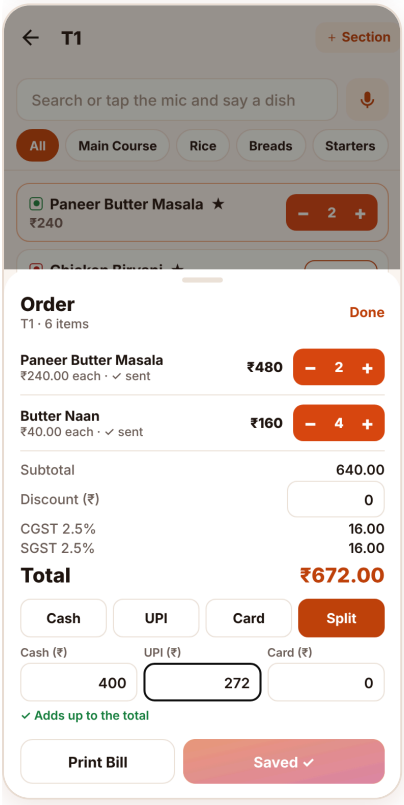

It understands short or Indian spellings: "chin biryani" finds Chicken Biryani, "pav baji" finds Pav Bhaji. Turn it on or off in **Settings → Printer & this phone → Voice search**.

6. Print the bill and take payment

1. Open the order and tap **View Order**.
2. Enter a discount if needed.
3. Under the total, choose how the customer pays: **Cash**, **UPI**, **Card** or **Split**.
4. Tap **Print Bill**. The bill prints with the payment and the table becomes free.

> If the owner turned off “Print Bill clears the table”, the table waits as **Billed**. Open it and tap **Receive Payment** when the customer pays.

Split payment

1. Tap **Split**.
2. Type the first amount, for example Cash 400.
3. Tap the next box: the rest fills in by itself (UPI 272).
4. When it says ✓ **Adds up to the total**, tap **Print Bill**. Each part is printed under the total.

7. Parcels and kitchen tickets

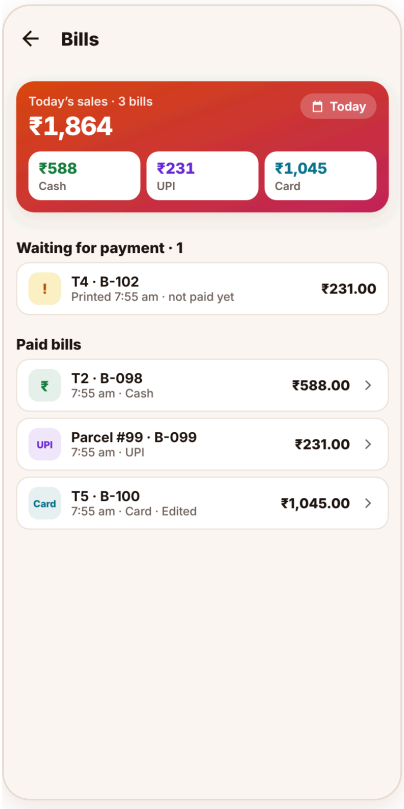

Parcels

1. On Tables, tap **Parcel** (bag icon), add dishes and tap **Print Bill**.
2. **With a kitchen printer** set up: the kitchen copy prints there by itself.
3. **Without one**: the customer's bill prints first; tear it off, then tap **Print** for the kitchen copy on the same printer (or **Skip**).

Kitchen tickets (KOT) for tables

Only when the owner turns on **Kitchen tickets (KOT) for tables** in Settings. Then the order sheet shows **Send to Kitchen**: it prints only the dishes added or cancelled since the last ticket, with the table in big letters. Without this setting there is no kitchen ticket for tables.

8. Bills (Settings → Bills)

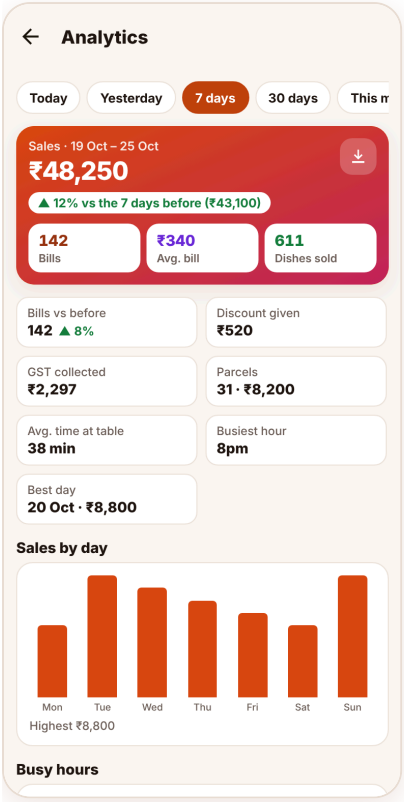

- The card shows the day's sales and the Cash / UPI / Card split. Tap **Today** to pick another date.
- **Waiting for payment**: bills printed but not paid.
- Tap a bill to see it and **Print** it again.

Owner only

- **Edit Bill**: change quantities, add a dish, discount or payment. Saved in the change log.
- **Delete**: type the confirmation word that Techyverve gave the owner, then tap **Delete Bill**. Keep this word private.

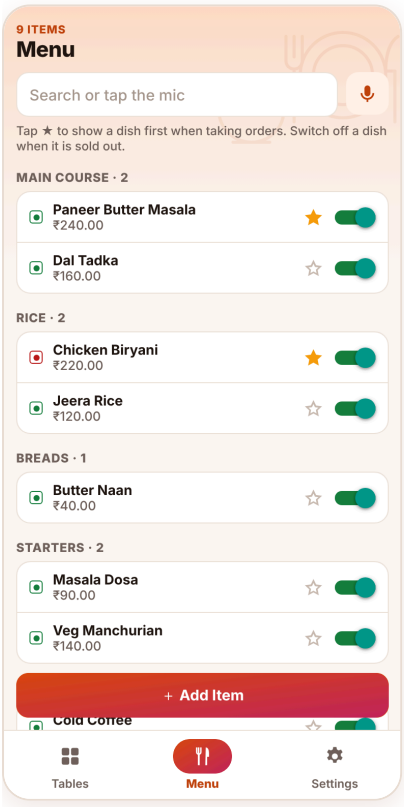

9. Analytics (Settings → Analytics)

- Choose Today, Yesterday, 7 days, 30 days, This month or Last month.
- See total sales and the change from the period before, bills, average bill, dishes sold, discount, GST, parcels, average time at table, busiest hour and best day.
- Charts: sales by day, busy hours, payments, weekdays; then top dishes and categories.
- Tap the **download** button on the orange card to share a spreadsheet (WhatsApp, email, Drive).

> Analytics loads only when you open it or change the dates. Pull down to refresh.

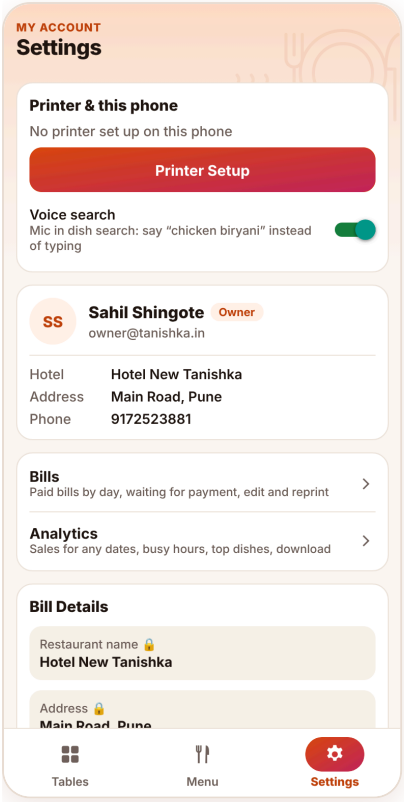

10. Menu (owner)

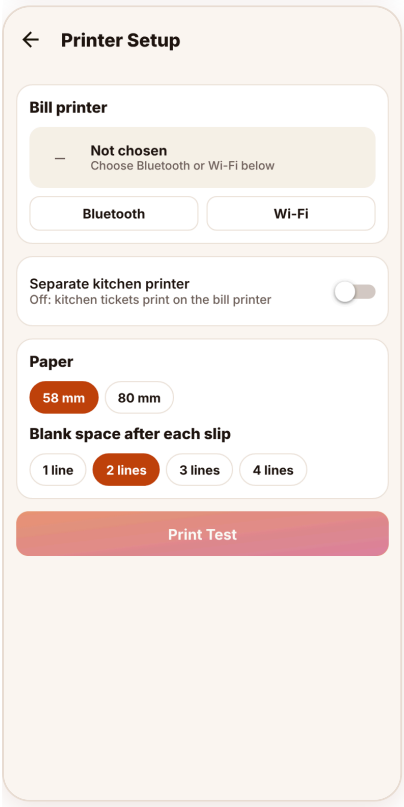

- The switch marks a dish **sold out** for today; tap it again when it is back.
- Tap ★ to show a dish first when taking orders.
- Tap a dish to edit its name, price, category or veg/non-veg, or to delete it.
- Tap **+ Add Item** for a new dish. Choose a category or tap **+ New**.

Tables already running keep the old price; new orders use the new one. Other phones get menu changes when they next open the app.

11. Settings

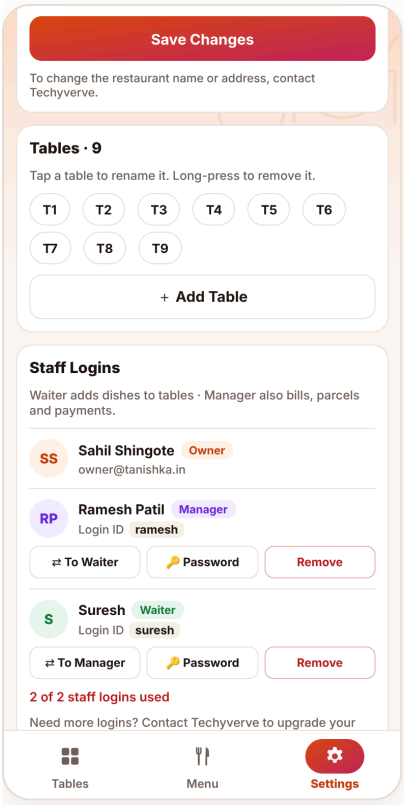

- **Printer & this phone**: Printer Setup and Voice search.
- Your profile and the hotel's details.
- **Bills** and **Analytics**.
- Owner: bill details (phone, GST, "Print Bill clears the table", kitchen tickets), tables, rooms and staff logins.
- **Sign Out** at the bottom.

Printer Setup

- **Bill printer**: tap **Bluetooth** and tap your printer in the list, or tap **Wi-Fi** and type its IP address (on the printer's self-test slip), then **Test & Save**.
- **Separate kitchen printer**: switch on and choose it the same way (Bluetooth or Wi-Fi).
- Choose paper **58 mm** or **80 mm** and the blank space after each slip, then **Print Test**.

Staff logins (owner)

- **+ Add Staff Login**: name, password and role (Waiter or Manager). Share the Login ID and password shown.
- **To Manager / To Waiter** changes the role. **Password** sets a new one. **Remove** stops that person signing in.
- The number of logins depends on your plan. Contact Techyverve for more.

Tables (owner)

Tap a table to rename it, long-press to remove it, **+ Add Table** for a new one.

12. Rooms (lodge plan)

- **Rooms** tab: tap a free room to **Check In** (guest, phone, guests, dates, rate).
- Open a room to change dates, rate or discount, add extra charges (breakfast, laundry), **Print** the room bill, **Check Out** with Cash/UPI/Card, or cancel the check-in.
- The owner adds rooms in Settings → Rooms.

13. Questions and fixes

Problem	What to do
“No internet” message	Keep taking orders: they stay on the phone and save when the internet is back.
Printer does not print	Check it is on, has paper and is near the phone. Settings → Printer Setup → Print Test. For Wi-Fi, the phone must be on the same Wi-Fi.
Bill prints cut or broken	Print Test again; if still wrong, send a photo of the slip to Techyverve.
Voice search does not hear	Allow the microphone for Master Bill in phone settings; speak close to the phone.
“No access yet”	Ask the owner to add you in Settings → Staff Logins.
“Service paused”	Contact Techyverve. Your bills and menu are safe.
