Master Bill — how many hotels can our servers handle?

Internal report for Techyverve Solution Limited · web app 1.0, phone app 2.0 · 25 Oct 2026

Supabase project: ftzhystkinhxxgddnqgp
Current plan: **Free**

Hotels today	Logins	Database size	Bills per hotel / day
4	**9**	**14 MB**	**17 avg · 85 max**

1. What one hotel uses (3 apps per hotel: owner, manager, waiter)

Item	Normal hotel (40 bills/day)	Busy hotel (150 bills/day)	How it is counted
Phones online	3	3–4	Owner, manager, waiter; each keeps one live connection
Requests per day	≈ 800	≈ 3,000	Save, kitchen ticket and bill = 1 each; open app = 4; other phones refresh once per change
Live update messages / month	≈ 15,000	≈ 55,000	Every order change is sent to every phone of that hotel
Data downloaded / month	≈ 80 MB	≈ 300 MB	Menu and tables come from the phone's saved copy; open orders ≈ 5 KB
Database growth / year	≈ 22 MB	≈ 80 MB	≈ 1.5 KB per bill with its items (measured)

2. Capacity by Supabase plan (the first limit reached decides)

Limit	Free plan	Hotels (normal / busy)	Pro plan ($25 ≈ ₹2,100 / month)	Hotels (normal / busy)
Live connections	200	≈ 65 / 50	500 (more can be bought)	≈ 165 / 125
Live messages / month	2 million	≈ 130 / 35	5 million (+$2.50 per extra million)	≈ 330 / 90 *
Data downloaded / month	5 GB	≈ 60 / 15	250 GB	≈ 3,000 / 800
Database size	500 MB	≈ 22 / 6 for a year	8 GB (+$0.125 per GB)	≈ 360 / 100 for a year
Backups	**None**	—	**Daily, 7 days kept**	—

* Paid add-ons raise this cheaply. Limits are Supabase's published plan limits as we know them; check supabase.com/pricing before deciding. The web app (Cloudflare Pages) and the phone app's download link have no practical limit here.

Safe today on the Free plan

≈ 15 busy or 40 normal hotels

Data downloaded (5 GB) runs out first. There are **no backups** on Free, so a mistake cannot be undone.

On the Pro plan (recommended now)

≈ 100 busy or 150 normal hotels

Live connections (500) run out first; buy more for ≈ 300 hotels. Daily backups included. Cost ≈ ₹25,000 a year, covered by 5 Pro customers (₹5,999 each).

3. Recommendation

- **Move to Supabase Pro before the 10th paying hotel** (or now), mainly for daily backups and room to grow.
- Keep one project for all hotels: every hotel's data is already kept apart by database rules.
- Check the Supabase usage page once a month; act at 70 % of any limit.

4. Future goals (in order)

#	Goal	Why	Effect on capacity
1	Small live messages: send only the changed order to phones instead of each phone re-reading all open orders	Fewer requests, faster phones	**≈ 3× more hotels per plan**
2	Offline orders: waiters keep taking orders without Wi-Fi; they send when it is back	No lost orders in weak-signal hotels	None
3	Google Play Store listing and iPhone (TestFlight / App Store)	Easy installs and automatic updates	None
4	Monthly archive of old bills to file storage, owner export to Excel/PDF	Keep the database small	**Database lasts years longer**
5	Kitchen display screen (tablet) as an alternative to KOT printing	No paper, clear queue	+1 connection per hotel
6	WhatsApp bill sharing, GST reports, stock of ingredients, multi-branch owners	Features hotels ask for	Small

Estimates assume 3 phones per hotel, lunch and dinner rush, and the app's current request pattern (saved menu, one request per save). Real use should be checked on the Supabase usage page each month.
